

# PyCon Australia 2010

## Call for Talks, Papers and Tutorials

PyCon Australia will be held in Sydney on the weekend of the 26th and 27th of June at the Sydney Masonic Center.

The first Australian PyCon event is expected to host over 150 Python programming enthusiasts. The weekend will see dozens of presentations on web programming, business applications, game development, science and mathematics, social issues, education, testing, databases, documentation and more.

Unlike formal conferences, PyCons are run by volunteer Python programmers; the users' perspective governs everything from talk selection to conference cost, making an exceptionally worthwhile conference. Participants themselves generate content, which can be as short as a 5 minute Lightning Talk, or as long as a 45-minute "How To" tutorial.

### Presentation Topics

- Core Python, including Python 3
- Other Pythons
- Web programming
- Python libraries and extensions
- Business applications
- Concurrency
- Databases
- Documentation
- Education
- Embedding and extending Python
- Game programming
- GUI programming
- Network programming
- Open source Python projects
- Packaging issues
- Programming tools
- Science and maths
- Social issues
- System administration
- Testing
